Acknowledgment

The Palestinian Central Bureau of Statistics (PCBS) would like to thank all the cooperating Palestinian Organizations and appreciates their commitment to bring this achievement into light.

The funding for the Israeli Settlements in the Palestinian Territory report was provided by the Palestinian National Authority (PNA) and the Core Funding Group (CFG) for 2008. CFG members include the Representative Office of Norway to the PNA; the Representative Office of Netherlands to PNA; and the Swiss Agency for Development and Cooperation (SDC).

Printing of this document was funded by the European Union. The content of this document are the sole responsibility of the PCBS.

On this occasion, PCBS extends special thanks to the members of the CFG and the EU for their support.

Important Remarks

Data at the end of year, unless otherwise stated.

The Statistics presented in this report are derived from various sources, which are not fully consistent. Therefore it's advisable to take this in consideration while using these statistics.

For the purpose of correlating area with population, a number of settlements of Jerusalem J1 were joined together in this report, and as a result the number of settlements was reduced from 22 settlements in the year 2003 to 16 settlements in the years 2004-2008. It should be emphasized that this decrease does not indicate in any way a reduction in settling in that area.

Preface

Israeli settlement activities in the Palestinian Territory constitute the most serious danger of the Israeli occupation that hampers the establishment of a viable national Palestinian state in the West Bank and the Gaza Strip. Guided by the Israeli government, the majority of Israeli organizations and institutions are working on the implementation of an organized program that aims to expand the settlements in the Palestinian Territory. Indeed, the settlements network and the accompanied changes in the demographical and topographical aspects are the main obstacle to establish a Palestinian state in the West Bank and the Gaza Strip with geographical continuity.

The Israeli-Jewish settlement movement does not only affect the political and security stability in the Palestinian Territory. It also destroys the social, economic, and environmental balance of the Palestinian society and the Palestinian land. This movement retards the development of the Palestinian society, pollutes the Palestinian environment, plays a significant role in controlling, destroying and cantonizing the Palestinian society and Territory. Moreover, the Israeli settlements are used as military bases to launch their continued war, incursions and hostilities against the Palestinian people. The effects of building Israeli settlements on Palestinian land have been devastating to Palestinian localities, which pay a heavy price for the expansion of such settlements, and for the daily assaults of Israeli settlers which are seen and heard by Israeli soldiers without taking any action to halt such activities.

We have continued to publish annual reports in this series which represents the main developments in Israeli settlement activities in the Palestinian Territory. We have focused on presenting quantitative descriptions of a number of main indicators related to settlements and settlers.

This report contains statistical data about the population and geographic indicators of the Israeli settlements in the West Bank. This report presents statistical information about the number of settlers and levels and nature of settling, in addition to the geographical spread, ruling ideology and other related subjects.

PCBS hopes that the main findings of this report will contribute to building a general frame about the situation of the Israeli settlements in the West Bank, in addition to providing reliable and useful statistics for Palestinian planners and decision-makers.

August, 2008

**Ola Awad
Acting President of PCBS**

Executive Summary

Occupation Sites

According to 2008 data, the number of occupation sites in the West Bank totaled 440, of them 144 were Settlements, 96 were Outposts inside Settlement boundaries, 109 were Outposts outside Settlement boundaries, 43 were Occupation Sites classified as Other Occupation Sites, and 48 were Military Bases.

According to Settlement distribution end of 2008, the data shows that, the most of them were in Jerusalem Governorate (26 settlements) and 16 of them were annexed by Israel. The percentage area beyond the reach of Palestinians was 38.3% of the West Bank total area end of 2007. The area of built-up land in different occupation sites reached 235,209 thousand square meters end of 2006.

The Settlers Population

Data indicate that the number of settlers in the West Bank at the end of 2008 reached 500,670 settlers including 302,212 in Remaining West Bank.

Data shows that most of settlers live in Jerusalem Governorate (261,885 Settlers) 198,458 of them in (J1), then Ramallah & Al-Bireh Governorate (87,059 Settlers), then Bethlehem Governorate (54,111 Settlers), then Salfit Governorate (30,824 Settlers). While the minimum number of settlers found in Tubas Governorates of (1,328 Settlers).

Phases of Settlements Building

Stage One, 1967-1976: Settlement building was established selectively, within a colonization policy based on quality, not quantity; settlements in this stage were concentrated in Jerusalem and the Jordan Valley, inspired by the Allon Plan

Stage Two, 1977-1984: During this stage there was an growing influential settlement movement for building and expanding settlements horizontally, the most important plans/projects during this stage could be summarized as follows: Sharon's Plan, Matityahu Drobls Plan and Gush Emunim Plan.

Stage Three, 1985-1990: At this stage colonialism re-accelerated - in terms of quantity - to the pace of the first stage.

Stage Four, 1991-2008: During this stage, the pace of settlement expansions sharply decreased. There was no building of new settlements in the years 1992-1995 and 1999-2008, for the first time since the Israeli occupation of Palestinian Territories began, due to the peace process and international pressure on Israel to freeze colonialism, and due to the absence of political stability in Israel during that stage.

The Israeli Occupation Authorities resorted to expand existing settlements during this period in order to compensate for the lack of new settlements, both through increasing population and establishment of new “neighborhoods” within the existing settlements. In addition, beginning with the establishment of the Annexation and Expansion Wall in June 2002, which was designed as a result of internal negotiations between the Israeli government and settler leaders, 88% of settlers were now inside the Annexation and Expansion Wall.

In the same period settlers established new outposts; the total of outposts reached was 205 by the year 2008.

Overall, the number of settlements increased between 1967 and 2008 from 1 settlement in 1967 to 144 in 2008.

Settlers in the Palestinian Territory increased their numbers by more than 40 times during the period 1972-2008. In comparison, the Jews in Historical Palestine area and in other Arab Occupied Territory increased their number by 2 times during the same period.

The Nature of Settling in the Palestinian Territory

In 2008, the number of urban settlements reached 45 in West Bank, 22 of them in Jerusalem Governorate, settlers of this type of settlements represent 88.0% of the total settlers in the West Bank, settlers of this type concentrated in Jerusalem Governorate, then Ramallah & Al-Bireh Governorate, then Bethlehem Governorate, then Qalqiliya Governorate, then Salfit Governorate. There are no urban settlements in Jenin, Tubas, Tulkarm, and Jericho & Al-Aghwar Governorates.

Overwhelming Ideology

Rural Settlement were classified according to the Overwhelming Ideology as: Religious, Secular, Mixed settlements

The settlers' population of rural settlements is distributed among 99 settlements, including 38 religious settlements with a population of 35,300 settlers, 36 secular settlements with a population of 10,526 settlers, and 8 mixed settlements with a population of 7,997 settlers. There are no available data with respect to religious ideology of the remaining settlements.

Chapter One

Introduction

1.1 Introduction

During the ongoing years of occupation, the Israeli Authorities employed their gigantic potentials to change the facts on the ground through the establishment and expansion of the Israeli settlements. Israeli measures continued in war and peace times, within a two-fold strategy of building an Israeli society on the occupied land and of destroying the Palestinian society through separation of the Palestinian communities and formation of cantons.

The preparation and dissemination of documented and updated statistics related to Israeli settlements on the West Bank is extremely needed as a major tool for the decision-makers.

1.2 Report Aims

The main objective of this report is to provide statistical data on the following indicators:

- The number and area of the settlements.
- The settler population in the settlements.

PCBS provides statistical data about Israeli settlements in the West Bank in terms of the demographic features of the settlements in question. The collected data is reference material for analytical studies dealing with the future prospects of the settlements' communities, and a step for developing a comprehensive database with respect to the settlements issue; eventually it will be an information tool in the hands of all those concerned, including strategic planners, decision-makers and researchers.

1.3 Report Structure

This report is divided into five chapters: The first chapter contains the introduction, aims and report structure. The second chapter contains the concepts and definitions in this report. The third chapter defines the main findings of the report. The fourth chapter explains the methodology of collection and tabulation of data. The fifth chapter handles data quality by presenting the main notes on the data and evaluation of this report's data sources.

Chapter Two

Concepts and Definitions

A Settlement

A settlement, which is considered by the Israeli occupation as legal settlement and meets locality conditions. The Israeli Central Bureau of Statistics defines a locality as follows:

An inhabited place according to the following criteria:

1. Mainly has 20 or more inhabitants.
2. Self-ruled.
3. Not included in the formal borders of another locality.
4. Formally recognized.

In addition to the settlements and Jewish neighborhoods; located in Jerusalem (J1).

Outpost

Civil or semi military building, which is not recognized by Israeli authority. However, the recognition would come later at the politically correct moment. Henceforth, an outpost may become a settlement or a military base.

Occupation Site

Includes settlements, outposts, military settlements, semi-military settlements, agricultural settlements, Israeli industrial areas and Israeli military bases.

Yesha Council

It refers to A council that represents settlers in the Remaining West Bank. Yesha is also the representing body of a number of regional councils.

Regional Council

It's an administrative authority representing a number of settlements.

Built –Up land in the Occupation Site

It refers to all areas of human activity within a settlement including built- up areas, service facilities, public parks, squares, and roads. It excludes any land that is planned for construction according to the master plan of the occupation site or confiscated land to be annexed later to the occupation site.

Urban Settlement

It's a settlement has 2000 or more inhabitants, beside those settlements located inside Jerusalem area (J1), which classified as urban settlements regardless the number of population.

Rural Settlement

It's a settlement has less than 2,000 inhabitants, also includes agricultural localities. Excluding settlements located inside Jerusalem area (J1), which classified as urban settlements regardless the number of population.

Moshav

It refers to a rural settlement organized as a cooperative association, which has the right to agricultural farmland (as defined by the Israel Lands Administration). These settlements consist of family units, each of which is an independent economic entity. Part of the

production and economic administration of the moshav is handled by the cooperative association, and the residents determine the degree of cooperation.

Collective Moshav

It refers to a collective rural settlement where production and marketing are cooperative and consumption is private.

Kibbutz

It refers to a collective rural settlement with cooperative production, marketing, and consumption.

Institutional Settlement

It refers to an institution, which has the characteristics of a settlement but is not within the administrative boundaries of another settlement.

Communal Settlement

It refers to a settlement organized as a cooperative association, which has no right to farmland and its members determine the extents of its cooperative activities concerning production, consumption, municipal, and social activities.

Other Rural Settlement

It's a settlement has less than 2,000 inhabitants and not found in any type of the settlements above.

Geographical Dispersion

This classification divides the West Bank into four areas (strips): the mountain strip, the western hills strip, and greater Jerusalem strip.

Each area includes settlements that share certain similarities in terms of topography, proximity to Palestinian communities and main roads, economic infrastructure, the composition of the population, distance from the Green Line, and the like.

The Eastern Strip: includes the Jordan Valley area and the shores of the Dead Sea (outside the Green Line), as well as the eastern slopes of the mountain range that bisects the entire West Bank from north to south.

The Mountain Strip: the area on or adjacent to the peaks of the mountain range. This area is also known as the watershed line or the mountain-peak area.

The Western Hills Strip: includes the western slopes of the mountain range, and extends to the Green Line to the west.

Greater Jerusalem Strip: this area extends across a wide radius around West Jerusalem. Although in purely geographical terms this area lies mainly in the Mountain Strip, it has unique characteristics that demand separate attention.

Average altitude (Meters)

The average height of land above the level of the Sea (meter) in relation to main population center.

Jerusalem (J1)

Includes that part of Jerusalem, which was annexed forcefully by Israel following its occupation of the West Bank in 1967. This part includes the following localities: (Beit Hanina, Shu'fat Refugees Camp, Shu'fat, Al' Isawiya, Sheikh Jarrah, Wadi Al - Joz, Bab Al-Sahira, As Suwwana, At -Tur, Jerusalem "Al - Quds", Ash - Shayyah, Ras Al-Amud, Silwan, Ath – Thuri, Jabal Al – Mukabbir, As – Sawahira Al – Gharbiya, Beit Safafa, Sharafat, Sur Bahir, and Um Tuba, Kufr A'qab).

Jerusalem (J2)

Includes the remaining parts of the governorate, namely: Rafat, Mikhmas, Qalandya Refugees Camp, the Bedouin Community - Jaba', Qalandya, Beit Duqqu, Jaba', Al – Judeira, Beit Anan, Al-Ram, Dahiat Al-Pareed, Al Al – Jib, Bir Nabala, Beit Ijza, Al – Qubeiba, Khirbet Um Al – Lahem, Biddu, An – Nabi Samu'eil, Hezma, Beit Hanina Al Tehta, Qatanna, Beit Surik, Beit Iksha, A'nata, The Bedouin Community – Al – Khan Al – Ahmar, Az Za'eem, Al – Sawahreh Al – Sharqiyeh, Ash – Sheikh Sa'd, The Bedouin Communities . Al – Eizariya, Abu Deis

Remaining West Bank

Includes the West Bank except that part of Jerusalem which was forcefully Annexed by Israel following its occupation of the West Bank in 1967, i.e. excluding J1 area in Jerusalem governorate.

A set of special symbols was used in the tables of this report

Main Findings

3.1 Occupation Sites

According to 2008 data, the number of occupation sites in the West Bank totaled 440; of them 144 were settlements, 96 were outposts inside settlement boundaries, 109 were outposts outside settlement boundaries, 43 were occupation sites classified as other occupation sites, and 48 were military bases.

According to settlement distribution end of 2008, the data shows that most of them were in Jerusalem Governorate (26 settlements) and 16 of them were annexed by Israel. The percentage of area beyond the reach of Palestinians was 38.3% of the West Bank total area at the end of 2007. The area of built-up land in different occupation sites reached 235,209 thousand square meters at the end of 2006.

Figure 1: Number of Settlements in the West Bank, by Governorate, 2008

3.2 The Settlers Population

Data indicate that the number of settlers in the West Bank in 2008 reached 500,670 settlers, including 198,458 in Jerusalem Governorate (J1).

Figure 2: Number of Settlers in the Settlements in the West Bank, by Governorate, 2008

The Israeli Occupation Authorities resorted to expand existing settlements during this period in order to compensate for the lack of new settlements, both through increasing population and establishing new “neighborhoods” within the existing settlements. In addition, beginning with the establishment of the Annexation and Expansion Wall in June 2002, which was designed as a result of internal negotiations between the Israeli government and settler leaders, 88% of settlers were now inside the Annexation and Expansion Wall.

In the same period settlers established new outposts; total outposts reached 205 by the year 2008.

Overall, the number of settlements increased between 1967 and 2007 from 1 settlement in 1967 to 144 in 2008.

Settlers in the Palestinian Territory increased their numbers by more than 40 times during the period 1972-2008. In comparison, the Jews in Historical Palestine area and in other Arab Occupied Territory increased their number by 2 times during the same period.

**Figure 3: Number of Settlers in the Settlements in the West Bank
by Year, 1988-2008**

3.3 The Nature of Settling in the West Bank

In 2008, the number of urban settlements reached 45 in West Bank, 22 of them in Jerusalem Governorate. Settlers of this type of settlement represent 88.0% of total settlers in the West Bank. Settlers of this type concentrated in Jerusalem Governorate (98.8% of the total settlers in the Governorate), followed by the Qalqiliya Governorate (94.0% of the total settlers in the Governorate), then the Bethlehem Governorate (85.4% of the total settlers in the Governorate), then the Ramallah & Al-Bireh Governorate (84.4% of the total settlers in the Governorate), then the Salfit Governorate (74.0% of the total settlers in the Governorate). There are no urban settlements in Jenin, Tubas, Tulkarm, and Jericho & Al-Aghwar Governorates.

In 2008 the data pointed out that there were 99 rural settlements in the West Bank, 54 settlements of them were classified as communal settlements with a population of 44,804 settlers, followed by moshav settlements (17 settlements with a population of 3,471 settlers).

3.4 Geographical Dispersion

Eastern Strip

This strip, at the end of 2008, includes 28 settlements with a population of 5,647 settlers representing 1.1% of all settlers in the West Bank.

Mountain Strip

This strip, at the end of 2008, includes 31 settlements with a population of 42,501 settlers representing 8.5% of all settlers in the West Bank.

Western Hills Strip

This strip, at the end of 2008, includes 48 settlements with a population of 135,878 settlers representing 27.1% of all settlers in the West Bank.

Greater Jerusalem Strip

This strip, at the end of 2008, includes 37 settlements with a population of 316,644 settlers representing 63.3% of all settlers in the West Bank.

Chapter Four

Methodology

This section presents the methodology used in data collection from the different sources: Applied Research Institute-Jerusalem (ARIJ), Israeli Central Bureau of Statistics, The Jerusalem Institute for Israeli Studies, The Israeli Information Center for Human Rights in the Occupied Territories - B'TSELEM.

4.1 Comprehensive

Data of Israeli settlements include all the areas classified by the Official Authority as West Bank, including settlements in J1, and no-man's-land in Ramallah & Al-Bireh Governorate.

Data on Israeli Settlements in the Palestinian Territory Report was prepared depending on the data about occupation sites extracted from the database, which was created to supply data about Israeli settlements in the Palestinian Territory.

4.2 Data Sources

Israeli Settlements Database

Since 2002, PCBS has created and developed a database including all the Israeli settlements in the Palestinian Territory, depending on various data sources, such as the Palestinian Ministry of Planning, in addition to other Palestinian sources and Israeli sources.

This database formed the overall framework for the list of Israeli settlements and associated indicators.

Applied Research Institute-Jerusalem (ARIJ)

Area of occupation sites and outposts were based on data of Applied Research Institute.

It should be noted that the data source of Applied Research Institute data is orthophoto and field research.

Israeli Central Bureau of Statistics

ICBS represents the main source of data on annual population of Israeli settlements and the establishment date of settlements, the type of settlements, Regional Council and institutional affiliations.

It should be noted that this data source represented the Israeli settlements located in the Remaining West Bank only. There is no data on settlements in the Jerusalem area (J1).

The Jerusalem Institute for Israeli Studies

Jerusalem Institute for Israeli Studies represents the main source of data for the settler population of the settlements located in the Jerusalem area (J1).

4.3 Data Processing

The Israeli settlements database contains many fields necessary for the preparation of tables; this database needs to be updated annually, and tables extracted based on the updated results, as follows:

1. Updating the database of previous years with regard to the population of each settlement, and the classification of new fields within the category of revised.
2. Linking the population of each settlement with a population of attribution and the settlements for which data are available; usually such data is temporary data.
3. With regard to settlements that do not have a population of attribution (often those with less than 1000 people), there is a population estimate based on the latest data available, using an assumption for the constant annual growth rate for the last two years for each settlement.
4. Re-examining the population of each settlement to change the classification depending on the number of people in attribution, for example, for settlements with a population over 2000, classification can be changed from rural to urban, and all fields related to this classification will be changed.
5. After updating the database, a comprehensive audit was done to examine the logic and consistency of the figures compared with previous data
6. Matching the results in the database with the results in the original sources and within the same geographic area of comparable data.
7. Extraction tables and auditing.

Chapter Five

Data Quality

This section provides the most important points that concern the statistical quality for the data used as sources for this report, “Israeli Settlements in the Palestinian Territory.” This depends on the data about occupation sites which was extracted from the database created to supply data about Israeli settlements in the Palestinian Territory, in addition to special technical notes which should be taken into consideration.

5.1 Accuracy of the Data

Area and the number of occupation sites

The data of area and number of occupation sites depend on data from the Applied Research Institute in the comprehensive database for all of the West Bank.

The data on the occupation sites (civil or semi-military occupation sites) could not be distributed by governorate because of differences between their classification and that adopted as the Palestinian official classification.

Number of Population

The number of settlers for the settlements which do not have data about population was estimated based on the assumption of constant annual growth rate of the latest two years according to available data.

Although this estimate is the most accurate, a lack of data is noted from some settlements due to an unexpected surge of settlement, so that the rate of annual growth for some reached 100%.

Naturally, the estimates at the level of governorates are more precise, and will minimize the effect of the anomalous values.

Regarding the general estimates at the level of the West Bank, accuracy of the data was improved to reflect a margin error of $\pm 6\%$.

5.2 Technical Notes

- For the purpose of correlating area with population, a number of settlements in Jerusalem-J1 were joined together in this report. As a result the number of settlements was reduced from 22 settlements in the year 2003 to 16 settlements in years 2004, 2005, 2006 and 2007. It should be emphasized that this decrease does not point in any way to reduction in settlement in that area.
- Data do not include Gaza Strip settlements, because of the Israeli withdrawal from Gaza Strip in 2005.
- There is a lack of inclusiveness of some data from all sources.
- Data derived from the Israel Central Bureau of Statistics publications does not include that part of Jerusalem that was annexed by Israel in 1967, in addition to settlements that were annexed by Israel from Ramallah and al-Bireh or Hebron Governorates.
- The statistics presented in this report are derived from various sources, which are not fully consistent. Therefore it is advisable to take this into consideration when using these statistics.

- The population data of settlements with less than 1000 settlers and the population of settlements in JI area are not available for the year 2007. This data was estimated through calculating the growth ratio of these settlements for the years 2007, 2008, assuming that it equals the growth ratio through the years 2007, 2008.
- Mention should be made to the universality of military bases in the statements of this report, unlike the years 2005-2007.
